FUEL INJECTOR TESTING SYSTEM

RESTRICTION

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, drawn to the structure of a fuel injector testing system, classified in class 73, subclass 119A.
- II. Claims 19-31, drawn to a method for testing a test volume for air leakage, classified in class 73, subclass 119A.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the structure of a fuel injector testing system as defined by invention I can be used to test a fuel injector system without requiring a test volume to be tested for an air leakage as defined by invention II.

Art Unit: 2855

Because these inventions are distinct for the reasons given above and the search required for invention I is not required for invention II, restriction for examination purposes as indicated is proper.

The Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).
